EDUCATION

York University

Bachelor of Science, Computer Science (Honours)

Toronto, Ontario

Expected April 2028

- Coursework: Object-Oriented Programming, Data Structures and Algorithms, Computer Organization

EXPERIENCE

Software Engineer Intern

Future Buildings & Toro Steel Buildings

May 2026 to Present

Greater Toronto Area, Ontario

- Automating business workflows to connect internal tools with cloud communication platforms, developing secure RESTful API endpoints to query SQL Server databases for **250+** sales reps and **3,500,000+** leads.
- Built a serverless Smart Lead Routing system using **JavaScript** and **AWS Lambda** that processes live **HTTP webhooks** to match incoming calls instantly, reducing manual routing transfers by **33%**.
- Engineered an automated SMS workflow system using **FastAPI** to send **250+** daily automated text messages to leads, tracked in **SQL** database tables while syncing data with a **Customer Management System**.

Software Engineer Intern

LangPal

Feb 2026 to Apr 2026

Seattle, Washington (Remote)

- Developed scalable microservices for a mobile language learning app using **FastAPI** and **Python** serving **3000+** **active users** to handle real speech-to-speech interaction scenarios.
- Integrated an enterprise AI model into production by engineering end-to-end audio pipelines that act as intelligent conversational agents, processing real-time voice responses with under **200ms** latency.
- Designed backend application architecture for **AI-driven mini-games** to automate content generation, applying advanced problem-solving to successfully improve daily user engagement by **15%**.

Founder

LifeByDorm | [Live Site](#)

Oct 2025 to Present

Toronto, Ontario

- Founded a B2C full stack dorm review application using **React** and **Node.js**, growing the platform to support **10,000+** **active users** across **100+** **universities** in Canada.
- Leveraged **AWS Lambda** for cloud serverless execution, **S3** for object storage, and secure **IAM policies** to protect user-uploaded data across an optimized **MongoDB** database schema.
- Designed and deployed a reusable **RESTful API** architecture to handle concurrent user traffic, ensuring low-latency query performance and high availability across **200+** authentic student reviews.

PROJECTS

TenantShield | 1st Place Winner | [GitHub](#) | [React](#), [Node.js](#), [Express.js](#), [LLM Integration](#)

Nov 2025

- Automated real-time detection of unsafe housing conditions by processing images with **Gemini Vision AI**, identifying **20+ hazards** with **95%+ accuracy** through AI-enabled workflows.
- Streamlined code analysis using **LLM integrations** to cross-reference housing violations, reducing document research time **from hours to under 30 seconds** via clean microservices architecture.

INVOLVEMENT

Software Developer

YU Blueprint

Jan 2026 to Present

Toronto, Ontario

- Contributed in building a central Gift Card Dashboard using **Next.js** and **PostgreSQL** to streamline non profit operations, successfully tracking and managing over **\$10,000** in digital donations.

TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Python, C, SQL, HTML/CSS

Frameworks: Node.js, React.js, Express.js, FastAPI, Next.js, React Native, Tailwind CSS

Tools/Cloud: RESTful APIs, Git, Jira, AWS (EC2, RDS, Lambda, S3), PostgreSQL, JUnit, Agile
