

Jason Tan

(226) 337-7465 | jasantanwork1@gmail.com | linkedin.com/in/jasantan5 | github.com/Jason-Tan1

EDUCATION

York University

Bachelor of Science, Computer Science (Honours)

Toronto, Ontario

Expected April 2028

- Coursework: Object-Oriented Programming, Data Structures and Algorithms, Computer Organization
- Achievements: 1st Place, YorkU CSHub Hackathon (\$400), \$2000 Entrance Scholarship

EXPERIENCE

Software Engineer Intern

Future Buildings & Toro Steel Buildings

May 2026 to Present

Greater Toronto Area, Ontario

- Automating backend ETL integrations to connect internal tools with cloud platforms, developing secure RESTful API endpoints to query SQL Server databases for **250+** sales reps in an Agile **Jira** environment.
- Built a serverless Smart Lead Routing system using **JavaScript** and **AWS Lambda** that processes live **HTTP webhooks** to match incoming calls instantly, reducing manual routing transfers by **33%**.
- Engineered an automated workflow system using **FastAPI** to send **250+** daily messages, tracking data in relational tables while maintaining technical **Confluence** documentation and supporting incident resolution.

Software Engineer Intern

LangPal

Feb 2026 to April 2026

Seattle, Washington (Remote)

- Developed scalable microservices for a mobile language learning app using **FastAPI** and **Python** serving **3000+** **active users** to handle real speech-to-speech interaction scenarios.
- Integrated an enterprise AI model into production by engineering end-to-end audio pipelines that act as intelligent conversational agents, processing real-time voice responses with under **200ms** latency.
- Designed backend application architecture for **AI-driven mini-games** to automate content generation, applying advanced problem-solving to successfully improve daily user engagement by **15%**.

Founding Engineer

LifeByDorm | [Live Site](#)

Oct 2025 to Present

Toronto, Ontario

- Founded a B2C full-stack platform using **TypeScript, React, and Node.js**, scaling infrastructure to seamlessly support **7500+** **active users** at **100+** **universities** across Canada.
- Leveraged **AWS Lambda** for cloud serverless execution, **S3** for object storage, and secure **IAM policies** to protect user-uploaded data across an optimized **MongoDB** database schema.
- Designed and deployed a reusable **RESTful API** architecture to handle concurrent user traffic, ensuring low-latency query performance and high availability across **165+** authentic student reviews.

PROJECTS

TenantShield | *1st Place Winner* | [GitHub](#) | *React, Node.js, Express.js, LLM Integration*

Nov 2025

- Automated real-time detection of unsafe housing conditions by processing images with **Gemini Vision AI**, identifying **20+ hazards** with **95%+ accuracy** through AI-enabled workflows.
- Streamlined code analysis using **LLM integrations** to cross-reference housing violations, reducing document research time **from hours to under 30 seconds** via clean microservices architecture.

Visual Debugger | [GitHub](#) | *TypeScript, VS Code API, LLM API*

Feb 2026

- Published an open-source **VS Code extension** with **200+** **installs** utilizing the **Gemini LLM API** as an intelligent agent to catch runtime errors and automate code fixes, streamlining code reviews.

INVOLVEMENT

Software Developer

YU Blueprint

Jan 2026 to Present

Toronto, Ontario

- Building a Gift Card Dashboard with **Next.js** and **PostgreSQL** to track over **\$10,000** in donations; performed rigorous **unit testing** (Vitest/JUnit paradigms) to support QA triage and maximize code reliability.

TECHNICAL SKILLS

Languages: Java (Spring), TypeScript, JavaScript, Python, C, SQL, HTML/CSS

Frameworks: Node.js, React, Express.js, FastAPI, Next.js, React Native, Tailwind CSS

Tools/Cloud: RESTful APIs, ETL, Git, Jira, Confluence, AWS, SQL Server, PostgreSQL, JUnit, Agile
